

# Project Cargo and DSU

Project cargo is a highly complex risk since tight delivery schedules, safety requirements and time constraints must be adhered to, often across various modes of transport. To successfully conclude a project cargo shipment, oversized goods can necessitate special requirements such as road surveys or police escorts. Industries using project cargo include oil and gas, wind power, engineering, mining, and construction.

In this webinar [Andrew Corton](#), Project Cargo Underwriter at Starr Insurance Companies and longest-serving member of the Joint Cargo Committee, will discuss the purpose of this product, types of cargo involved, information required by underwriters, wordings and focus on many of the DSU areas that make this subject so interesting.

Following Andrew's presentation there will be time for questions from the audience.

If you have any comments or queries prior to the session please send them to [education@iumi.com](mailto:education@iumi.com).

## Registration:

This webinar is free of charge.

Please click below to register for your session:
